

Invest in future. Invest in your side of the firewall

“ Hacken builds the next level of application security and makes perfecting your code and network architecture more affordable by uniting the best European and global human expertise with advanced cybersecurity machine learning.

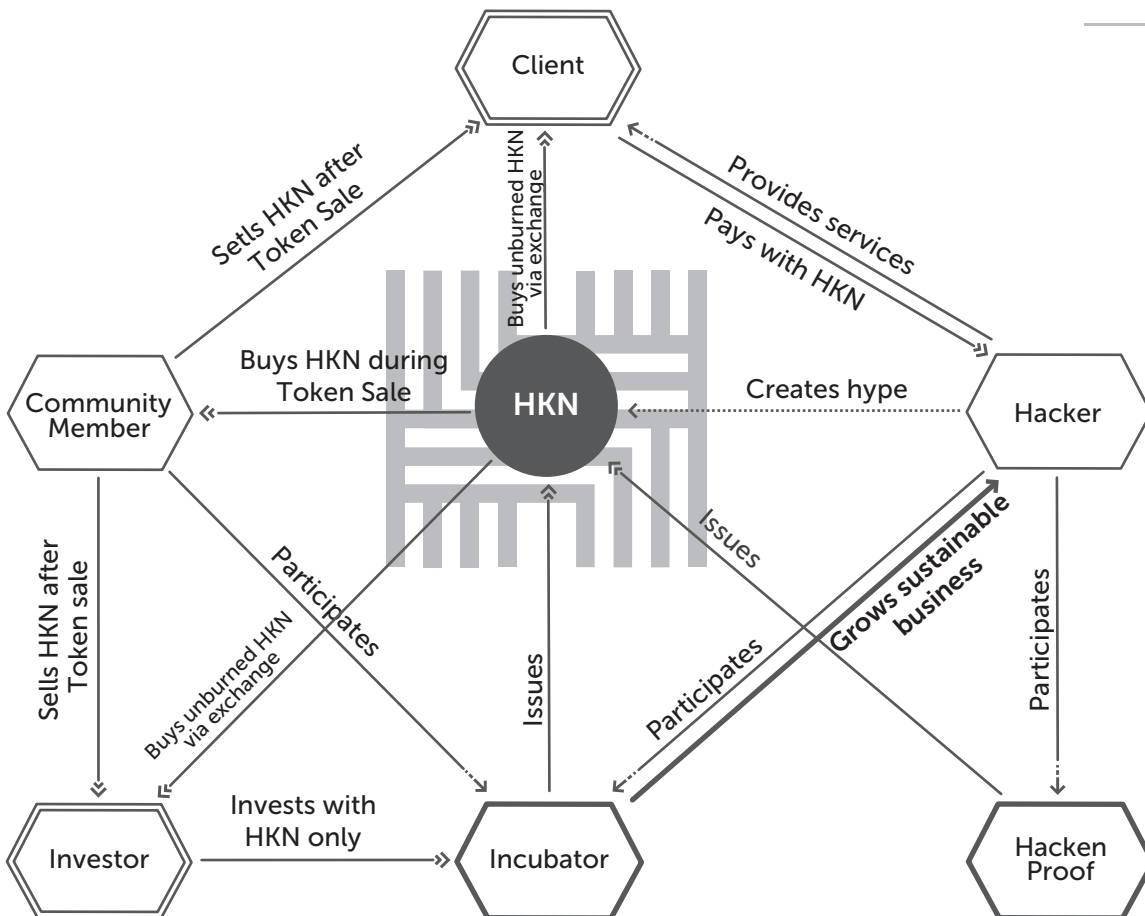

We provide individualized service based on peculiarities of your code and cybersecurity perimeter and offer wide customization options for each bug bounty program that we help our clients to organize and manage.

Currently the primary focus of Hacken is blockchain technology that offers prodigious promise to global finance and even state governance, while still being supported by an infrastructure that is rather volatile.

Hacken is determined to become the medium of cooperation between the blockchain community and global cybersecurity experts, whose expertise is based on the *real life* defence and penetrations.

HACKEN ECOSYSTEM

- HackenProof bug bounty marketplace;
- Unreported Zero-Day Remuneration Platform;
- Hacken Cybersecurity Startups Incubator;
- Cybersecurity Analytics Center and
- HackIT Conference.

This diagram explains the composition of our ecosystem, its underlying links and the key ideas behind the upcoming Hacken coin sale.
